Geigy Double Summer gloves. I purchased them online and they were very well packaged. The gloves were in good shape but there were minor (as seen on the left picture below) and major imperfections in the leather (as seen on the right picture below). My wife and I were in need of gloves so I decided to give these a try. After wearing them for only a few hours and a couple of washes I can say they do not hold up very well to the rigors of fall and winter weather. I am a very hard worker with a rough job and the gloves would not stand up to the punishment I give them every day. They tear at the finger and wrist openings and they tend to separate at the wrist and thumb while on the job. Also, the stitching around the finger, thumb and wrist openings, along with the finger box, would not stand up to the punishment I deliver. I am a firm believer that proper care and maintenance of your handwear is critical to the longevity of your gloves, so I would not recommend these gloves to anyone who needs a durable pair of handwear.

1. Field of the Invention This invention relates to a fixing unit and an image forming apparatus. 2. Description of the Related Art In a fixing unit used in electrophotography, various methods of heating a recording material (for example, paper) and a toner image applied thereto have been known. A roller fixing unit is known as a fixing unit of such methods. The roller fixing unit is a fixing unit using a heating roller and a pressure roller, and performs fixation by applying heat and pressure to the toner image carried on the recording material by pressing the recording material against the heating roller heated to a predetermined temperature. The roller fixing unit is superior to the pressurization type in that fixing can be carried out within a short time and power consumption is small. Thus, it is broadly used in a copy machine, a printer, or the like. In the roller fixing unit, if the recording material is released from the pressure
