Description: EFS Finder is a powerful file search tool for EFS network systems. It can quickly search all shared network resources of the system, including directories, files, and sub-directories. You can also search hidden resources, restricted access resources, IP subnets, LAN FTP servers and much more. EFS Finder is an effective tool to locate and manage the files you need on your network. It can quickly search for files and you can even search for files of specific type, which can be very helpful when you are searching for specific files. This is an extremely fast and powerful file search tool that can find and identify all shared network resources of your system. It is an efficient tool to manage the files you need on your network. It includes over 30 powerful search features.

Description: The software allows you to hide, encrypt or lock files and directories in network folders. You can lock any file or folder from everyone with an access to it. It can be activated and deactivated by anyone using the software and requires no permissions or user accounts. The software uses the AES-256 encryption algorithm and generates a unique random password for all the active locked files and directories. It automatically stores

the password for future access in case the original password is forgotten. Files and directories can be locked individually or as a whole. You can also change the expiration date for locked files and directories to a custom value or leave them to expire forever. The software allows you to set a password and expiration date to a file or a directory. Files and
